

Let's get started finding the right medication, right for you.

ONEOME.COM

What is PGx testing?

Did you know that your DNA plays a role in how you may respond to certain medications? Your body may break down a medication too slowly or too quickly, which could result in side effects, or no therapeutic effect at all.

A pharmacogenomic (PGx) test can tell your doctor which medications may work better for you, based on your DNA.

The RightMed Test

OneOme®RightMed® Test is a doctor-prescribed PGx test that helps you find medications and dosages more likely to work for you. This may help reduce medication trial and error, minimize side effects, and make informed medication decisions now and in the future.

Benefits of the RightMed Test

The RightMed Test has the potential to help your doctor:

Reduce medication trial and error.

Minimize medication related side effects.

Save you time and money.

Provide years of informed medication decisions.

I brought my RightMed Test results back to the doctors and asked that they consider them when choosing a new medication for me. They reviewed them and switched me to a different medication. Within days, I felt so much better.

- RACHAEL

How the **RightMed Test** works

STEP 1:

Your doctor prescribes the RightMed Test.

STEP 2:

You provide a cheek swab DNA sample - at home or in your doctor's office.

STEP 3:

OneOme processes your sample and generates your test results.

STEP 4:

Your doctors use the results to help optimize medication selection for you, now and in the future.

Is PGx testing right for me?

Are you currently taking prescription medication(s)?

YES
NO

Are you taking any medication(s) that may not be working the way your doctor intended?

YES
NO

Are you currently experiencing unwelcome side effects from your medications?

YES
NO

Would you like your doctor to have a tool to help make more personalized prescription decisions for you?

YES
NO

If you answered yes to any of the questions above, a pharmacogenomic (PGx) test may benefit you. Consider speaking to your doctor about the RightMed Test.

Co-founded by the Mayo Clinic, OneOme is a market leader in precision medicine, providing PGx solutions.

Through its services, OneOme aims to impact patient safety, reduce the overall cost of care, and improve patients' health outcomes.
